and lift off the ground. In this NASA/JPL-Caltech activity project, you will build a paper helicopter.

## **Project: Make a paper Mars helicopter - RocketSTEM**

To create a paper helicopter, cut a piece of paper to be 2.5 inches wide and 7 inches long. Next, fold your paper in half lengthwise, crease it, unfold the paper, and lay it flat. Then, cut halfway down the crease and make 2 small cuts in toward the center line.

## **How to Create a Paper Helicopter (with Pictures) - wikiHow**

Our paper helicopters don't generate lift or ascend, but the force of air upward on the blades as they fall is what causes our paper helicopters to spin. As a paper helicopter falls, air presses on each of the blades with an equal force but in the opposite direction and the helicopter spins around.

1 a "helicopter" can be made from an 8 1/2 x 11 sheet of paper in a minute or so. The scenario I'll describe requires three people whom I'll call Tom, Dick, and Harry.

## **Teaching Engineers Experimental Design with a Paper Helicopter**

How does a helicopter stay in the air? The science of a helicopter is exactly the same as the science of an airplane: it works by generating lift—an upward-pushing force that overcomes its weight and sweeps it into the air. Planes make lift with airfoils (wings that have a curved cross-section). As they shoot forwards, their wings change the pressure and direction of the oncoming air, forcing ...

## **How does a helicopter work? - Explain that Stuff**

The idea originated with Kip Rogers of Digital Equipment and is useful for demonstrating fractional factorial designs. Decades after Box, Bisgaard
